This Product does not contain soy, soy products, or soy by-products. Due to this, other sources of protein are used to meet the amino-acid requirements of your chickens. The sources used in this formulation are Organic Flaxseed meal, Organic Canola Meal, and Organic Field Peas. Using these alternative forms of protein will cause slightly lower production levels than a soy based feed.

In very rare instances, feeding a soy-free feed, to some breeds of laying hens, may cause a slight fishy smell in the eggs. If you experience this, please contact us at www.greenmountainfeeds.com, or call 802-234-6278. Chances are, you will not experience this. However, if you do, we can give you further information for avoiding it in the future!

This product is new. Please contact us with any feedback that you think would be important to us! The more feedback that we get, the better. We are going to continue our research with soy free feeds, and start introducing more soy-free options to our product line!

We proudly use:
